

NEYX

TOKEN ALLOCATION

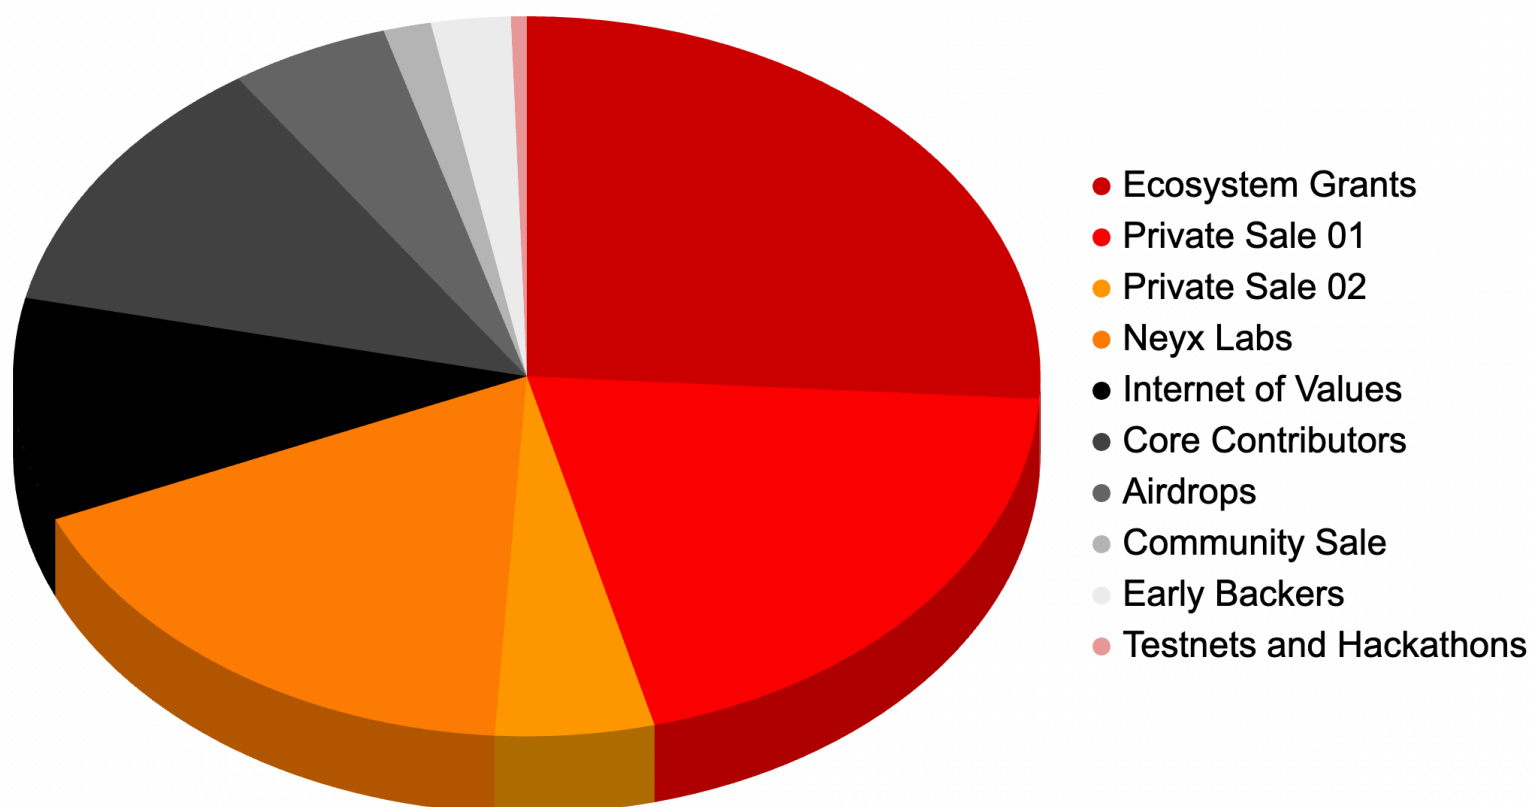

A NEW ERA OF ECONOMICS

Our Token Economy stands out in the blockchain world by centering the entire value-creation process on certified oracles, a stark contrast to traditional ecosystems where rewards are predominantly allocated to validators and stakers. This often leads to a lack of adequate compensation for other vital contributors.

In our innovative model, the rewards are directed towards the certifying participants. This means inflation rewards are shared not just with validators and stakers, but also with all certifying dApps and certified oracles. This approach uniquely positions our chain as a pioneer in incentivizing increased certification, thereby enhancing transparency and ensuring higher compliance in validations and transactions.

Category	Percentage of Token Supply	Number of NEYX Tokens
Ecosystem Grants	26.00%	260,000,000
Private Sale 01	20.00%	200,000,000
Private Sale 02	5.00%	50,000,000
Neyx Labs	17.50%	175,000,000
Internet of Values.	10.00%	100,000,000
Core Contributors	12.00%	120,000,000
Airdrops	5.00%	50,000,000
Community Sale	1.50%	15,000,000
Early Backers	2.50%	25,000,000
Testnets and Hackathons	0.50%	5,000,000
Total	100.00%	1.000.000.000

Early Backers

2.5% of Token Supply

Our project places immense value on the trust and commitment shown by our Early Backers. To honor this, we have structured a meticulous unlocking schedule for the allocated tokens, ensuring a balanced and sustainable ecosystem.

The initial phase is a 1-year lockup period. During this time, tokens allocated to Early Backers will not be available for trading or transfer. This lockup period is essential for maintaining the stability and integrity of the token's value, aligning with our long-term vision and the interests of all stakeholders.

Linear Unlocking Over Two Years

Following the conclusion of this 1-year lockup, the remaining tokens will be released in a linear fashion over the next two years. This means that tokens will be unlocked on a per-block basis, ensuring a smooth, predictable flow of tokens into the market. This gradual release mechanism is designed to prevent market disruption and provide our Early Backers with a consistent and fair unlocking process.

Commitment to Sustainable Growth

This unlocking schedule reflects our commitment to sustainable growth and long-term value creation. It balances the interests of our Early Backers with the overall health of the token economy, ensuring that we build a robust and resilient platform for all our users.

Ecosystem Grants

As part of our commitment to foster a robust and evolving blockchain ecosystem, we are allocating 26% of our tokens directly to the ecosystem. This strategic decision is anchored in our vision of sustainable, collaborative growth and innovation.

Rationale Behind the 26% Allocation

Allocating a substantial portion of our tokens to the ecosystem underlines our dedication to its development. This initiative is designed to empower both developers and business professionals, fuelling innovation and driving value creation within the blockchain space.

Empowering Developers

For developers, this allocation means access to more resources and support to pioneer cutting-edge solutions. It enables them to experiment, innovate, and align with the evolving trends in blockchain technology, ensuring that our ecosystem remains at the forefront of technological advancement.

Catalysing Business Growth

Business professionals stand to gain from an expanded network, new collaborative opportunities, and the ability to leverage advanced technology for growth. This token allocation is poised to catalyse their success, offering them the tools and connections necessary to thrive in a dynamic blockchain environment.

Long-Term Vision

Our token allocation strategy is a fundamental component of our long-term vision for a thriving, inclusive, and continuously developing blockchain ecosystem. It's a commitment to turning the complexities of blockchain into accessible opportunities, guiding us towards a more inclusive and advanced technological future.

Core Contributors

Neyx dedicates 10% (100 millions of Neyx tokens) to Core Contributors.

This group includes key people who playing a role in the protocol's conception, development, design, growth, and implementation. This innovative protocol is the result of years of effort, marked by the extensive dedication of these experts.

It's crucial to note that the entire allocation for Core Contributors will be distributed during the launch of our first Mainet.

Regarding the token distribution schedule for Core Contributors, it's structured as follows: a 3-year unlocking schedule commences at the token generation event. This includes an initial lockup period of one year, followed by a linear unlocking period over the next two years, calculated on a per-block basis. All allocated tokens can be staked; however, staking rewards are not accessible until the conclusion of the first year of the unlocking period.

Neyx Labs

17.5% of Token Supply

17.5% of tokens are allocated to Neyx Labs, a strategic move for the development of essential blockchain tools, such as electronic wallets, user interfaces for oracles, and the expansion of our business network.

Company vs. Foundation

We have consciously opted for a corporate model over a foundation. This decision underscores our commitment to combining blockchain decentralization with concrete business-focused initiatives and real-world problem-solving.

Furthermore, our aim is to foster the prosperity of both our company and its ecosystem of partners, which will be achieved through the development of business-oriented solutions. This approach is fundamental to our vision of an actively integrated and influential blockchain in the economy.

Internet of Values

10% of Token Supply

While Neyx is a new project, it is not a journey begun from scratch. We are building upon a foundation of substantial experience, backed by a team of over 35 seasoned blockchain developers. We are fortunate to leverage the network, expertise, and business acumen of the Internet of Values organisation. This strong backing has been instrumental in our development and incubation. In recognition of this invaluable support, we believe it is only fair to allocate a significant portion, specifically 10%, of our resources to this entity that has been a catalyst in our growth and evolution.

Airdrops

5% of Token Supply

Airdrops, in the blockchain world, involve the free distribution of digital tokens to various blockchain wallet addresses. This mechanism serves multiple purposes: increasing token distribution, raising awareness, and encouraging a wider user base. However, at Neyx Labs, we perceive airdrops as more than a marketing tool; we see them as an essential step towards achieving genuine decentralisation in the blockchain universe.

The Role of Airdrops in Decentralisation

Decentralization stands as a cornerstone in the blockchain revolution, ensuring that control and decision-making are not centralized within a small group. By distributing tokens widely through airdrops, Neyx Labs aims to distribute the power and influence within our network more evenly. This distribution ensures that a diverse group of token holders, each with their own unique perspectives and interests, can contribute to the network's governance and future direction.

DESINFLATION

Neyx Tokens Inflation Model: Reduction Over 10 Years

Models principles

The decreasing exponential inflation model is designed to align the evolution of our Neyx ecosystem with a sustainable economic strategy. This model reduces the annual inflation rate from 12% to 6% over a 10-year period, utilizing an exponential curve for a smooth transition.

Decreasing Inflation

Formula

The following formula is used to calculate the annual inflation rate:

$$\text{Annual Inflation Rate} = 12\% * e^{-\alpha \times (\text{Current Year} - 1)}$$

In this formula, e represents the base of the natural logarithm, and α is a coefficient adjusted to ensure that the rate reaches 6% at the end of the 10-year period.

Application at the Block Level

To determine the inflation rate per block, we convert the annual rate based on the number of blocks produced each year:

$$\text{Inflation Rate per Block} = \frac{\text{Number of Blocks per Year}}{\text{Annual Inflation Rate}}$$

DESINFLATION

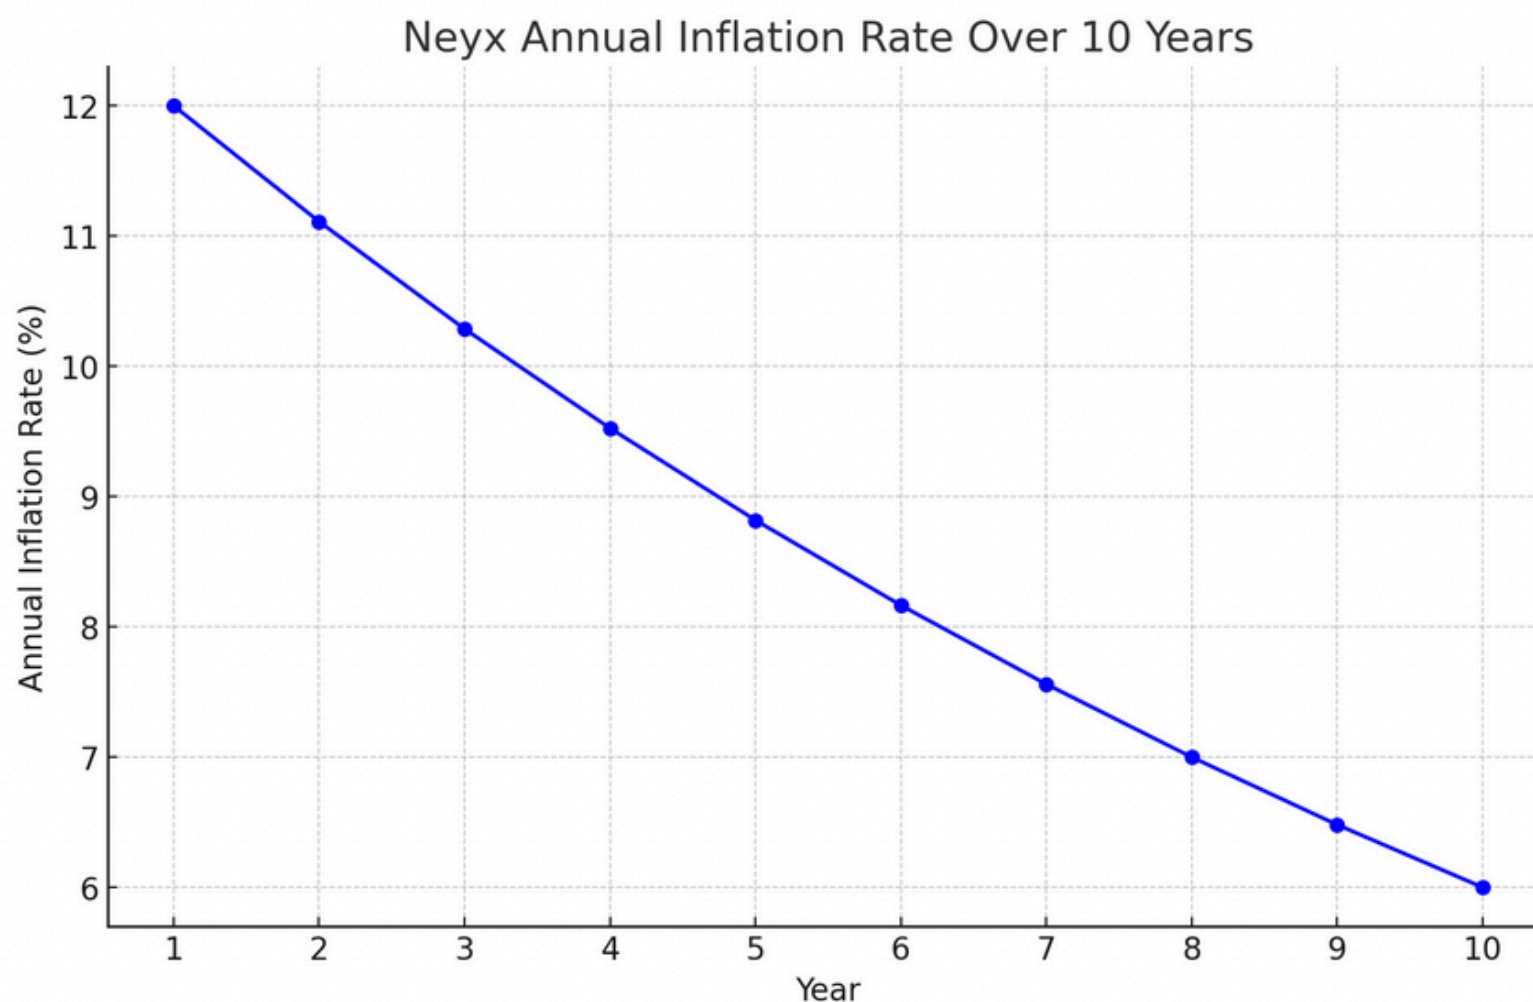

Neyx Deflation Model

Gradual and controlled increase in the total number of tokens in circulation

Year	Annual Inflation Rate (%)	Tokens Issued Annually	Total Cumulative Tokens
1	12.00%	120,000,000	1,120,000,000
2	11.11%	111,104,965	1,231,104,965
3	10.29%	102,869,278	1,333,974,243
4	9.52%	95,244,063	1,429,218,306
5	8.82%	88,184,070	1,517,402,376
6	8.16%	81,647,400	1,599,049,776
7	7.56%	75,595,263	1,674,645,039
8	7.00%	69,991,742	1,744,636,781
9	6.48%	64,803,584	1,809,440,365
10	6.00%	60,000,000	1,869,440,365

This table shows a gradual and controlled increase in the total number of tokens in circulation, reflecting the strategy of progressive inflation reduction over a 10-year period.

DESINFLATION

Here is the graph showing the annual inflation rate of Neyx tokens over a 10-year period, based on the decreasing exponential model. As illustrated, the inflation rate starts at 12% and gradually decreases to reach 6% by the end of the 10-year period. This graph clearly demonstrates the smooth and continuous reduction in inflation, in line with the proposed model.

Benefits of this approach

The exponential approach offers several advantages:

1. **Smoothing the Inflation Rate:** Avoids abrupt variations, providing increased predictability for investors.
2. **Adaptability:** Naturally adapts to the growth and maturation of the ecosystem.
3. **Balance:** Maintains a balance between incentivizing early adopters and protecting the value for long-term participants.
